

TwinMop TM2815

Mop Selection

Monsoon
Kentucky Mops

Slalom
Pocket and
Hang-on Mops

The Twinmop 2815 is a world first, being a complete compact dual bucket mopping system incorporating our large, oversize, clean water bucket, dirty water pail and using our patented AWS (Automatic Water Separation) system.

AWS is a serious operational advance... it means you only work from the one generous 28-litre clean water bucket below the press, but every time you use the press the water is automatically discharged into the red dirty water pail providing for quick and easy emptying and refilling.

AWS really does make mopping quicker and better.

The Twinmop system is equipped with the All-Mops Press allowing use with the full range of Monsoon-Kentucky mops and Slalom-Flat mopping systems.

The chassis is of all welded steel construction running on 75mm (3") non-marking castors, ensuring excellent mobility.

A small caddy is also provided to permit all those essential cloths, sprays, etc to be carried as standard.

250mm Big Wheel 'Transit-Stair-Curb' option.

See pages 20 & 21 for full mop selection details. Photographs include extra items for illustration purposes only.
